

## 6 Week Interval Softball Throwing Program

### Warm-up:

Jogging, jumping rope, etc to increase blood flow to the muscles; once a light sweat is developed, move to stretching.

### Stretching:

Full body stretching is important for reducing the chance of injury and for increasing mobility of all parts of the body (which allows the whole body to be used to throw, rather than just the arm).

### Throwing mechanics:

A crow-hop technique should be used in all phases of the interval throwing program. This technique places the arm in a mechanically sound position for throwing.

### Throwing:

Warm-up throws should take place from 30-45 feet and progress to the distance indicated for the following successive phases. Progress to the next step of the program once current step is accomplished completely free of pain. Allow at least 48 hours to pass between successive steps. Each athlete progresses at different rates. There is no optimal length of this program. Once program is completed successfully, the athlete is ready to return to unrestricted overhand throwing.
